Semester Project Part 1: Topic Selection

Website Name:

Palmetto Fresh Meats

Description Of My Topic (5 sentences):

Palmetto Fresh Meats is a butcher shop in Aynor, SC that processes beef and pork. They have a selection of fresh and frozen meat that can be ordered and picked up, or they allow clients to look through the meat case and sometimes the freezers as well. Another service they offer is the processing of beef and pork that is brought in by clients. All the clients must do is bring the livestock to the shop and they will take it from there.

List of each page name:

1. Home Page
2. About Us
3. Contact Us
4. FAQ's
5. Place an Order

Data storing, manipulating, and viewing.

On the place order you must log in to access it so the company can see the orders and keep up with the client's contact info. The client can look at previous orders as well. There will be different order sheets that they can choose from and make the specifications that they want. I am going to need a data reader and data writer so that the information can be processed and saved so that the owner(or people with access) can view the document and complete the clients order.
